

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

smallness of the Brain, as also of the Mouth, and strange Teeth of this Fish examining withall, whether the *Glossopetrae* be the *Teeth* of this Creature, or *Stones* produced by the Earth; in which Controversie he takes their part, who maintain, that those and divers other substances found in the Earth, are parts of the Bodies of Animals, and endeavours to prove, that such sorts of Earth may be the sediments of Water, and such Bodies, the parts of Animals carried down together with those Sediments, and in progress of time reduced to a stony hardness.*

* This Subject Mr. Hook hath also discoursed of at large in several of his publick Lectures, founded by Sir John Cutler; which Lectures he read about two years since in Gresham College, in the presence of many Learned and Curious persons; which also had been long since made publick, had not other indispensible Affairs hindred him from taking care of the Press: where he hath not only shewn the Origin of these *Glossopetræ*, but of all other curiously figur'd Stones and Minerals; together with that of Mountains, Lakes, Islands, &c. tho' from a somewhat differing Hypothesis, of which the Curious may shortly receive a further account.

The other Narrative is of a Female *Dog-Fish*, dissected also by himself, where do occur no less remarkable Observations than in the former, both of the parts in the Head, and of those in the Body; as touching the small weight of the Brain of this Fish, compared to the weight of its Body; several little *Fishes* found in the Stomach, untouched by any Teeth; the *Vreters*, the *Ovarium*, and *Ovidictu*, where he digresses to shew, *Mulierum testes esse Ovario analogos*, and refers for further proof of this to his intended Treatise, which is, to give an account *de partium Genitalium Analogia*.

An Advertisement.

The Publisher hereof gives notice, That a brief *Index* for the *Transactions* of this last year, beginning at Numb. 23. in March 1667. shall be printed apart for the use of such as desire to have all those Numbers together.

E R R A T A.

Vhat the Printer for want of room did omit hitherto, in the giving notice of an Error committed by him in Numb. 29. the Reader is now desired to observe here, viz. That in the said Number, for want of Marks proper to express Multiplication, there was used, pag. 571. l. 5, 7. the mark of Plus or Addition, which yet 'tis thought could hardly occasion any mistake in the intelligent Readers, who might easily see the meaning of the Author by the lines 8, 9, 10. of the next precedent page 570.

In the SAVOR,

Printed by T. N. for John Martyn, Printer to the Royal Society, and are to be sold at the Bell a little without Temple-Bar, 1667.
